

Yiğit Enes Kaya

Full-Stack Developer | Computer Engineering Student

eneskaaya3@gmail.com | +90 506 154 10 60 | Izmir, Türkiye | linkedin.com/in/yigit-enes-kaaya | github.com/vdnp | npmjs.com/~vdnp

SUMMARY

Final-year Computer Engineering student at Düzce University, focused on ERP and enterprise business applications. I have built a lot-based traceability, quality and accounting system for medical manufacturing and a fleet management system for automotive services, and published an open-source npm package. I build end-to-end products, from database design to mobile apps, with Next.js, TypeScript, Django REST Framework, ASP.NET Core and React Native.

PROJECTS

Medical Manufacturing, Quality & Accounting ERP

Freelance Project

Django REST Framework | Next.js | TypeScript | PostgreSQL | Celery/Redis | React Native | Docker

Lot-based web + mobile ERP covering the full raw-material-to-sale process for an orthopedic implant manufacturer.

- Built the goods receipt → quarantine → quality approval → FEFO stock issue flow on a state machine (django-fsm), meeting medical traceability requirements with an immutable audit trail.
- Developed lot genealogy tracking from finished products down to raw material lots, and a module that auto-fills sequentially approved quality forms into official PDF/DOCX templates.
- Built the accounting layer: customer/supplier accounts, invoices and delivery notes, cheque and promissory note portfolio, multi-currency treasury (Central Bank of Türkiye FX integration) and VAT summary.
- Wrote a React Native field app with QR/GS1 barcode scanning and an offline action queue. Pytest and Playwright tests run in CI on GitHub Actions.

Fleet & Service Management System

In progress

ASP.NET Core 8 Web API | Entity Framework Core | Next.js 16 | React 19 | TypeScript

Automotive service application managing vehicles, client accounts, staff and service requests.

- Designed the backend with Clean Architecture (Domain / Application / Infrastructure / Presentation) and a generic repository pattern.
- Implemented role-based authorization and audit logging with ASP.NET Identity and JWT; built reusable form and table infrastructure on the frontend with react-hook-form, Zod and TanStack Table.

image-turbo — Open-Source npm Package

github.com/vdnp/image-turbo

TypeScript | React | Canvas / OffscreenCanvas API | tsup | Playwright

Client-side image compression and direct-to-cloud upload library for React/Next.js (MIT, published on npm).

- Compresses images to WebP in the browser with zero dependencies, using only Web APIs (3.4 MB JPEG → 632 KB, 82% smaller).
- Implemented direct uploads to S3, Cloudflare R2 and Vercel Blob via pre-signed URLs, bypassing the server; designed a headless *useImageTurbo* hook and a ready-made dropzone component.
- Built a cancellable pipeline with an explicit state machine and AbortSignal; verified with 84 unit tests and Playwright E2E tests running in a real browser.

Deterministic RTS Game Engine

Personal | In development

TypeScript | Babylon.js | Vitest | pnpm monorepo

Browser-based, moddable engine for real-time strategy games.

- Wrote a fully deterministic, platform-independent simulation core using Q16.16 fixed-point math and seeded randomness.
- Decoupled the 30 Hz simulation from rendering via interpolation; built a TOML/Zod-based mod loading pipeline, golden snapshot tests and a headless replay verifier.

EXPERIENCE

Software Engineering Intern — Software Persona

Jun 2026 – Jul 2026

Frontend Developer (Intern) — Ekşioğlu Law Office | Istanbul

Jul 2025 – Oct 2025

EDUCATION

B.Sc. in Computer Engineering — Düzce University

Oct 2022 – Present

TECHNICAL SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML/CSS, Web APIs
Backend	Django REST Framework, Python, ASP.NET Core, C#, Entity Framework, Node.js / Mongoose
Mobile	React Native (Expo), Kotlin (basic)
Data & Infra	PostgreSQL, Redis, Celery, Docker, GitHub Actions
Testing & Tools	Pytest, Playwright, Vitest, Git, Postman, C++ (beginner)

CERTIFICATIONS & LANGUAGES

Certifications	React JS (BTK Academy, Mar 2026); JavaScript Fundamentals (BTK Academy, Feb 2025); Kotlin Programming Language (BTK Academy, Jan 2025); AI 101 (Akbank Youth Academy, Jan 2022)
Languages	Turkish — Native; English — B2 (listening/reading), B1 (speaking/writing)
